## In The Claims

Please amend Claims 1, 16, 22, 32, 42, and 46 as follows:

5

1. (currently amended) A method of advertising, the method comprising:  
maintaining an Internet-related communication session between a user and a voice portal;

10

during the communication session, periodically selecting and playing advertisements automatically based on context ratio and sales ratio determination; and selectively disabling a user's ability to stop or interrupt an advertisement from being played depending upon the advertisement being played;

wherein said periodically selecting and playing advertisements automatically based on said context ratio and sales ratio determination further comprises the steps of following algorithm:

15

setting category weights,  $W_k$ , for each category  $C_k$  as follows:

initializing each  $W_k = 0$ , where  $k \in \{1, \dots, n\}$ ;

for each  $i \in \{1, \dots, m\}$  and for each  $j \in \{1, \dots, n\}$ , based on the current attributes of the existant,  $\{e_1, e_2, \dots, e_m\}$ , if  $e_i$  satisfies  $p_j$  and  $p_j$  is associated with category  $C_k$ , then setting  $W_k = W_k + w_i$ , where  $k \in \{1, \dots, n\}$ ;

20

tabulating the categories' total weights independent of the attributes of the existant, wherein from said total weights, establishing each category's context ratio:

for each  $k \in \{1, \dots, n\}$  and for each  $j \in \{1, \dots, n\}$ , if  $p_j$  is associated with category  $C_k$ , then setting  $T_k = T_k + w_j$  and setting the context category context ratio,  $R_k = W_k/T_k$ ;

25

for each category  $k$ , multiplying each  $R_k$  by the category weight  $x_k$  of each Ad  $A_i$ , and then multiplying the sum by the sales criteria ratio of the Ad,  $S_i$ , to get context total  $G_i$ :

for each  $i \in \{1, \dots, n\}$ , calculate  $G_i$  where

30

$G_i = S_i \cdot (R_1 x_1 + \dots + R_n x_n)$ ; and

selecting the Ad  $A_i$ , where  $i$  is defined by  $\max(G_i), i \in \{1, \dots, n\}$ ;

wherein:

the list of attributes of the existant passed into the algorithm is defined by the set  $\{e_1, e_2, \dots, e_m\}$ , where  $m$  is the number of attributes in the existant;

35

the list of categories available to associate advertisements with is defined by the set  $\{C_1, C_2, \dots, C_n\}$ , where  $n$  is the total number of categories;

QUAC0004

09/531,951

$W_i$  is a context category weight for each category,  $C_i$ , where  $i \in \{1, \dots, n\}$ ;

the market research criteria for all existants is represented by  $P = \{p_1, p_2, \dots, p_t\}$  where  $t$  is the total of all criteria in the database, each criterion  $p_i$  has an associated weight  $w_i$ , where  $i \in \{1, \dots, t\}$  and each attribute  $e_i$  tries to satisfy all  $p_i$ , for all  $i, j$ , where  $i \in \{1, \dots, m\}$ ,  $j \in \{1, \dots, t\}$  such that thus, if  $e_i$  satisfies  $p_i$ , and  $p_j$  belongs to category  $C_k$ , then  $W_k = W_k + w_i$ , where  $i \in \{1, \dots, m\}$ ,  $j \in \{1, \dots, t\}$ ,  $k \in \{1, \dots, n\}$ ;

the associated strength ratio  $R_s$  is calculated as  $R_k = W_k/T_k$ , where  $T_k$  is the total weight of all criteria in  $P$  relating to category  $k$ ; and

the list of advertisements generated by the demographic query are defined by the set  $A = \{A_1, A_2, \dots, A_r\}$ , where  $r$  is the total number of ads in the list, each ad  $A_i$  has its own category weight  $x_k$ , where  $i \in \{1, \dots, r\}$  and  $k \in \{1, \dots, n\}$  which is used in conjunction with the algorithm's corresponding context category weight ratio  $R_k$ ; and

wherein a sales ratio of an advertisement is defined as follows:  
 (% of units of time already played - % of ads played) / Number of units of time remaining in contract.

providing an existent object of interest, said existent having one or more attributes and one or more market research criteria, said one or more market criteria having associated weights;

providing a set of one or more advertisements, each of said one or more advertisements having one or more associated categories, wherein each one or more advertisements has category weight associated with each one or more associated categories, and each of said one or more advertisements having an associated sales ratio;

determining for each one or more categories a content category weight using said one or more market research criteria, and using said determined context category weight to calculate a category context ratio;

determining for each advertisement of said set of one or more advertisements a context total value, said context total value determined by said associated sales ratio, said category weight associated with said each one or more associated categories, and said category context ratio for said each one or more associated categories; and

determining a selected advertisement to play from said advertisements by determining a maximum context total value from said determined context total value for each advertisement.

QUAC0004

09/531,951

2. (original) The method of claim 1, wherein the step of selectively providing advertisements comprises:
- 5 playing an audio message identifying a product or service to be advertised, including a query as to whether the user would like to hear more information regarding the product or service;
- identifying a response of the user; and
- selectively playing an audio advertisement for the product or service, if the response was affirmative.
- 10 3. (original) The method of claim 2, wherein the step of playing an audio message identifying a product or service is in response to a previous user selection.
4. (original) The method of claim 2, wherein the step of playing an audio message identifying a product or service comprises identifying a preference of the user
- 15 and selecting an advertisement for a product or service which corresponds to the preference of the user.
5. (original) The method of claim 4, wherein the step of identifying a preference of the user comprises identifying the user and retrieving preference information
- 20 corresponding to the user, the preference information being stored in a database.
6. (original) The method of claim 2, wherein the step of identifying a response of the user comprises applying voice recognition techniques.
- 25 7. (original) The method of claim 2, wherein the step of selectively playing an audio advertisement comprises defining a set of advertisements, assigning weights to each member of the set of advertisements, and selecting a member of the set of advertisements based on its assigned weight.
- 30 8. (original) The method of claim 7, wherein the step of assigning weights to each member of the set of advertisements comprises prioritizing each member of the set of advertisements.
9. (original) The method of claim 8, wherein the step of prioritizing each
- 35 member of the set of advertisements comprises determining a ratio based on sales criteria corresponding to each advertisement of the set of advertisements.

QUAC0004

09/531,951

10. (original) The method of claim 7, further comprising making a record of the audio advertisement selectively played, the record being used in defining a cost of advertising for the audio advertisement.

5

11. (original) The method of claim 2, wherein the step of identifying a response comprises playing a confirmation audio message to confirm the response.

10

12. (original) The method of claim 1, wherein the step of maintaining an Internet-related communication session between a user and a portal comprises establishing a communication connection between a wireless application protocol (WAP) device and the portal.

15

13. (original) The method of claim 1, wherein the step of maintaining a communication session between a user and a portal comprises establishing a communication connection between a web device and the portal.

20

14. (original) The method of claim 1, wherein the step of maintaining an Internet-related communication session comprises communicating with a voice interface.

15. (original) The method of claim 1, wherein the step of maintaining an Internet-related communication session comprises communicating with a personal computer (PC) interface.

25

16. (currently amended) A service which provides audio advertisements over a two way communication device during a communication session, the service comprising:

a user interface which coordinates communication of the service with a user and receives voice commands from the user that allow the user to navigate through the service;

30

an advertising subsystem coupled to the user interface, the advertising subsystem being configured to coordinate the selective presentation of advertisements to the user, said selective presentation based on context ratio and sales ratio determination;

35

whereby the advertisements include sponsorship advertisements which accompany each communication session, advertisements selectively played based on

QUAC0004

09/531,951

particular attributes of the user, and advertisements selectively played based on permission by the user; and

selectively disabling a user's ability to stop or interrupt an advertisement from being played depending upon the advertisement being played;

- 5 wherein selective presentation based on context ratio and sales ratio determination further comprises the following algorithm:

setting category weights,  $W_k$ , for each category  $C_k$  as follows:

initializing each  $W_k = 0$ , where  $k \in \{1, \dots, n\}$ ;

- 10 for each  $i \in \{1, \dots, m\}$  and for each  $j \in \{1, \dots, t\}$ , based on the current attributes of the existant,  $\{e_1, e_2, \dots, e_m\}$ , if  $e_i$  satisfies  $p_j$ , and  $p_j$  is associated with category  $C_k$ , then setting  $W_k = W_k + w_j$ , where  $k \in \{1, \dots, n\}$ ;

tabulating the categories' total weights independent of the attributes of the existant, wherein from said total weights, establishing each category's context ratio:

- 15 for each  $k \in \{1, \dots, n\}$  and for each  $j \in \{1, \dots, t\}$ , if  $p_j$  is associated with category  $C_k$ , then setting  $T_k = T_k + w_j$  and setting the context category context ratio,  $R_k = W_k/T_k$ ;

for each category  $k$ , multiplying each  $R_k$  by the category weight  $x_k$  of each Ad  $A_j$ , and then multiplying the sum by the sales criteria ratio of the Ad,  $S_j$ , to get context total  $G_j$ ;

- 20 for each  $i \in \{1, \dots, t\}$ , calculate  $G_i$ , where

$G_i = S_i \cdot (R_1x_1 + \dots + R_nx_n)$ ; and

selecting the Ad  $A_i$ , where  $i$  is defined by  $\max(G_i)$ ,  $i \in \{1, \dots, t\}$ ;

wherein:

- 25 the list of attributes of the existant passed into the algorithm is defined by the set  $\{e_1, e_2, \dots, e_m\}$ , where  $m$  is the number of attributes in the existant;

the list of categories available to associate advertisements with is defined by the set  $\{C_1, C_2, \dots, C_n\}$ , where  $n$  is the total number of categories;

$W_j$  is a context category weight for each category,  $C_i$ , where  $i \in \{1, \dots, n\}$ ;

- 30 the market research criteria for all existants is represented by  $P = \{p_1, p_2, \dots, p_t\}$  where  $t$  is the total of all criteria in the database, each criterion  $p_j$  has an associated weight  $w_j$ , where  $j \in \{1, \dots, t\}$  and each attribute  $e_i$  tries to satisfy all  $p_j$  for all  $i, j$ , where  $i \in \{1, \dots, m\}$ ,  $j \in \{1, \dots, t\}$  such that thus, if  $e_i$  satisfies  $p_j$ , and  $p_j$  belongs to category  $C_k$ , then  $W_k = W_k + w_j$ , where  $i \in \{1, \dots, m\}$ ,  $j \in \{1, \dots, t\}$ ,  $k \in \{1, \dots, n\}$ ;

- 35 the associated strength ratio  $R_s$  is calculated as  $R_k = W_k/T_k$ , where  $T_k$  is the total weight of all criteria in  $P$  relating to category  $k$ ; and

QUAC0004

09/531,951

the list of advertisements generated by the demographic query are defined by the set  $A = \{A_1, A_2, \dots, A_r\}$ , where  $r$  is the total number of ads in the list, each ad  $A_i$  has its own category weight  $x_k$ , where  $i \in \{1, \dots, r\}$  and  $k \in \{1, \dots, n\}$  which is used in conjunction with the algorithm's corresponding context category weight ratio  $R_k$ ; and

5 wherein a sales ratio of an advertisement is defined as follows:  
(% of units of time already played - % of ads played) / Number of units of time remaining in contract.

~~providing an existant object of interest, said existant having one or more attributes and one or more market research criteria, said one or more market~~  
 10 ~~criteria having associated weights;~~

~~providing a set of one or more advertisements, each of said one or more advertisements having one or more associated categories, wherein each one or more advertisements has category weight associated with each one or more associated categories, and each of said one or more advertisements having an~~  
 15 ~~associated sales ratio;~~

~~determining for each one or more categories a content category weight using said one or more market research criteria, and using said determined context category weight to calculate a category context ratio;~~

~~determining for each advertisement of said set of one or more advertisements a context total value, said context total value determined by said associated sales ratio, said category weight associated with said each one or more associated categories, and said category context ratio for said each one or more associated categories; and~~  
 20

~~determining a selected advertisement to play from said advertisements by determining a maximum context total value from said determined context total value for each advertisement.~~  
 25

17. (original) The service of claim 16, wherein the user interface comprises a receiver and a transmitter configured to communicate audio signals to and from the user.  
 30

18. (original) The service of claim 16, further comprising at least one database coupled to the advertising subsystem, the at least one database storing information about the user and the advertisements played.  
 35

QUAC0004

09/531,951

19. (original) The service of claim 16, wherein the advertisements selectively played based on permission by the user are selected by the user voicing an affirmative response to a query.

5 20. (original) The service of claim 16, wherein advertisements selectively played based on particular attributes of the user comprise a prioritization based on the particular attributes of the user.

10 21. (original) The service of claim 16, wherein advertisements selectively played based on particular attributes of the user comprise a prioritization based on sales criteria associated with the advertisements.

22. (currently amended) A system for advertising using voice control, the system comprising:

15 means for maintaining a communication session between a user and a voice portal;

means for periodically selecting and playing advertisements automatically during the communication session based on context ratio and sales ratio determination; and

20 selectively disabling a user's ability to stop or interrupt an advertisement from being played depending upon the advertisement being played[[.]];

wherein means for periodically selecting and playing advertisements automatically during the communication session based on context ratio and sales ratio determination further comprises means for performing the following algorithm:

setting category weights,  $W_k$ , for each category  $C_k$  as follows:

25 initializing each  $W_k = 0$ , where  $k \in \{1, \dots, n\}$ ;

for each  $i \in \{1, \dots, m\}$  and for each  $j \in \{1, \dots, t\}$ , based on the current attributes of the existant,  $\{e_1, e_2, \dots, e_m\}$ , if  $e_i$  satisfies  $p_j$  and  $p_j$  is associated with category  $C_k$ , then setting  $W_k = W_k + w_{ij}$ , where  $k \in \{1, \dots, n\}$ ;

30 tabulating the categories' total weights independent of the attributes of the existant, wherein from said total weights, establishing each category's context ratio:

for each  $k \in \{1, \dots, n\}$  and for each  $j \in \{1, \dots, t\}$ , if  $p_j$  is associated with category  $C_k$ , then setting  $T_k = T_k + w_{ij}$  and setting the context category context ratio,  $R_k = W_k/T_k$ ;

35 for each category  $k$ , multiplying each  $R_k$  by the category weight  $x_k$  of each Ad  $A_i$ , and then multiplying the sum by the sales criteria ratio of the Ad,  $S_i$ , to get context total  $G_i$ ;

QUAC0004

09/531,951

for each  $i \in \{1, \dots, r\}$ , calculate  $G_i$  where  
 $G_i = S_i \cdot (R_1 x_{i1} + \dots + R_n x_{in})$ ; and  
 selecting the Ad  $A_i$ , where  $i$  is defined by  $\max(G_i)$ ,  $i \in \{1, \dots, r\}$ ;  
 wherein:

5            the list of attributes of the existant passed into the algorithm is defined by the set  $\{e_1, e_2, \dots, e_m\}$ , where  $m$  is the number of attributes in the existant;

            the list of categories available to associate advertisements with is defined by the set  $\{C_1, C_2, \dots, C_n\}$ , where  $n$  is the total number of categories;

10            $W_i$  is a context category weight for each category,  $C_i$ , where  $i \in \{1, \dots, n\}$ ;

            the market research criteria for all existants is represented by  $P = \{p_1, p_2, \dots, p_t\}$  where  $t$  is the total of all criteria in the database, each criterion  $p_i$  has an associated weight  $w_i$ , where  $i \in \{1, \dots, t\}$  and each attribute  $e_j$  tries to satisfy all  $p_i$  for all  $i, j$ , where  $i \in \{1, \dots, m\}$ ,  $j \in \{1, \dots, t\}$  such that thus, if  $e_j$  satisfies  $p_i$  and  $p_i$  belongs to category  $C_k$ , then  $W_k = W_k + w_i$ , where  $i \in \{1, \dots, m\}$ ,  $j \in \{1, \dots, t\}$ ,  $k \in \{1, \dots, n\}$ ;

15           the associated strength ratio  $R_k$  is calculated as  $R_k = W_k / T_k$ , where  $T_k$  is the total weight of all criteria in  $P$  relating to category  $k$ ; and

            the list of advertisements generated by the demographic query are defined by the set  $A = \{A_1, A_2, \dots, A_r\}$ , where  $r$  is the total number of ads in the list, each ad  $A_i$  has its own category weight  $x_{ik}$ , where  $i \in \{1, \dots, r\}$  and  $k \in \{1, \dots, n\}$  which is used in conjunction with the algorithm's corresponding context category weight ratio  $R_k$ ; and

            wherein a sales ratio of an advertisement is defined as follows:

$(\% \text{ of units of time already played} - \% \text{ of ads played}) / \text{Number of units of time remaining in contract}$ .

25           ~~means for providing an existant object of interest, said existant having one or more attributes and one or more market research criteria, said one or more market criteria having associated weights;~~

~~means for providing a set of one or more advertisements, each of said one or more advertisements having one or more associated categories, wherein each one or more advertisements has category weight associated with each one or more associated categories, and each of said one or more advertisements having an associated sales ratio;~~

30           ~~means for determining for each one or more categories a content category weight using said one or more market research criteria, and using said determined context category weight to calculate a category context ratio;~~

QUAC0004

09/531,951

~~means for determining for each advertisement of said set of one or more advertisements a context total value, said context total value determined by said associated sales ratio, said category weight associated with said each one or more associated categories, and said category context ratio for said each one or~~

5

~~more associated categories; and~~  
~~means for determining a selected advertisement to play from said advertisements by determining a maximum context total value from said determined context total value for each advertisement.~~

10 23. (original) The system of claim 22, wherein the means for providing advertisements comprises:

means for playing an audio message identifying a product or service to be advertised, including a query as to whether a user would like to hear more information regarding the product or service;

15

means for identifying a user's response; and

means for selectively playing an audio advertisement for the product or service, if the user's response was affirmative.

20

24. (original) The system of claim 23, wherein the means for playing an audio message identifying a product or service is in response to a previous selection.

25

25. (original) The system of claim 23, wherein the means for playing an audio message identifying a product or service comprises means for identifying a preference of the user and selecting an advertisement for a product or service which corresponds to the preference of the user.

30

26. (original) The system of claim 24, wherein the means for identifying a preference of the user comprises means for identifying the user and retrieving preference information corresponding to the user, the preference information being stored in a database.

27. (original) The system of claim 23, wherein the means for identifying a user's response comprises applying voice recognition techniques.

35

28. (original) The system of claim 23, wherein the means for selectively playing an audio advertisement comprises means for defining a set of advertisements, means

QUAC0004

09/531,951

for assigning sales criteria to each member of the set of advertisements, and means for selecting a member of the set of advertisements based on its sales criteria.

29. (original) The system of claim 28, wherein the means for assigning sales  
5 criteria comprises means for determining achieved advertisement delivery rate.

30. (original) The system of claim 28, further comprising means for making a  
record of the audio advertisement selectively played, the record being used in defining  
a cost of advertising for the audio advertisement.

10

31. (original) The system of claim 23, wherein the means for identifying a user's  
response comprises means for playing a confirmation audio message to confirm the  
identified listener's response.

15 32. (currently amended) A method of selecting and playing advertising in a voice  
controlled computer environment comprising:

receiving voice navigational commands from a user;

generating a set of possible advertisements, the set of possible advertisements  
being related to a context;

20

ordering the set of possible advertisements based on a sales criteria associated  
with each advertisement of the set of possible advertisements and based on context  
ratio and sales ratio determination;

periodically selecting and playing advertisements automatically from the set of  
possible advertisements based on the ordering; and

25

selectively disabling a user's ability to stop or interrupt an advertisement from  
being played depending upon the advertisement being played;

wherein ordering based on said context ratio and sales ratio determination  
further comprises the steps of performing the following algorithm:

setting category weights,  $W_k$ , for each category  $C_k$  as follows:

30

initializing each  $W_k = 0$ , where  $k \in \{1, \dots, n\}$ ;

for each  $j \in \{1, \dots, m\}$  and for each  $i \in \{1, \dots, f_j\}$ , based on the  
current attributes of the existant,  $\{e_1, e_2, \dots, e_m\}$ , if  $e_i$  satisfies  $p_i$  and  $p_i$  is associated  
with category  $C_k$ , then setting  $W_k = W_k + w_i$ , where  $k \in \{1, \dots, n\}$ ;

tabulating the categories' total weights independent of the attributes of the  
35 existant, wherein from said total weights, establishing each category's context ratio:

QUAC0004

09/531,951

for each  $k \in \{1, \dots, n\}$  and for each  $i \in \{1, \dots, f\}$ , if  $p_i$  is associated with category  $C_k$ , then setting  $T_k = T_k + w_i$  and setting the context category context ratio,  $R_k = W_k/T_k$ ;

- 5 for each category  $k$ , multiplying each  $R_k$  by the category weight  $x_k$  of each Ad  $A_i$ , and then multiplying the sum by the sales criteria ratio of the Ad,  $S_i$ , to get context total  $G_i$ ;

for each  $i \in \{1, \dots, r\}$ , calculate  $G_i$ , where

$$G_i = S_i \cdot (R_1 x_1 + \dots + R_n x_n); \text{ and}$$

selecting the Ad  $A_i$ , where  $i$  is defined by  $\max(G_i)$ ,  $i \in \{1, \dots, r\}$ ;

10

wherein:

the list of attributes of the existant passed into the algorithm is defined by the set  $\{e_1, e_2, \dots, e_m\}$ , where  $m$  is the number of attributes in the existant;

the list of categories available to associate advertisements with is defined by the set  $\{C_1, C_2, \dots, C_n\}$ , where  $n$  is the total number of categories;

15

$W_i$  is a context category weight for each category,  $C_i$ , where  $i \in \{1, \dots, n\}$ ;

the market research criteria for all existants is represented by  $P = \{p_1, p_2, \dots, p_t\}$  where  $t$  is the total of all criteria in the database, each criterion  $p_i$  has an associated weight  $w_i$ , where  $i \in \{1, \dots, f\}$  and each attribute  $e_i$  tries to satisfy all  $p_i$ , for all  $i, j$ , where  $i \in \{1, \dots, m\}$ ,  $j \in \{1, \dots, f\}$  such that thus, if  $e_i$  satisfies  $p_i$ , and  $p_i$  belongs to category  $C_k$ , then  $W_k = W_k + w_i$ , where  $i \in \{1, \dots, m\}$ ,  $j \in \{1, \dots, f\}$ ,  $k \in \{1, \dots, n\}$ ;

20

the associated strength ratio  $R_s$  is calculated as  $R_k = W_k/T_k$ , where  $T_k$  is the total weight of all criteria in  $P$  relating to category  $k$ ; and

25

the list of advertisements generated by the demographic query are defined by the set  $A = \{A_1, A_2, \dots, A_r\}$ , where  $r$  is the total number of ads in the list, each ad  $A_i$  has its own category weight  $x_k$ , where  $i \in \{1, \dots, r\}$  and  $k \in \{1, \dots, n\}$  which is used in conjunction with the algorithm's corresponding context category weight ratio  $R_k$ ; and

wherein a sales ratio of an advertisement is defined as follows:

30

$(\% \text{ of units of time already played} - \% \text{ of ads played}) / \text{Number of units of time remaining in contract}$ ,

providing an existant object of interest, said existant having one or more attributes and one or more market research criteria, said one or more market criteria having associated weights;

35

providing a set of one or more advertisements, each of said one or more advertisements having one or more associated categories, wherein each one or more advertisements has category weight associated with each one or more

QUAC0004

09/531,951

~~associated categories, and each of said one or more advertisements having an associated sales ratio;~~

~~determining for each one or more categories a content category weight using said one or more market research criteria, and using said determined context category weight to calculate a category context ratio;~~

~~determining for each advertisement of said set of one or more advertisements a context total value, said context total value determined by said associated sales ratio, said category weight associated with said each one or more associated categories, and said category context ratio for said each one or more associated categories; and~~

~~determining a selected advertisement to play from said advertisements by determining a maximum context total value from said determined context total value for each advertisement.~~

33. (original) The method of claim 32, wherein the context comprises information on the user's preferences, user's location, and user's personal characteristics.

34. (original) The method of claim 32, wherein the sales criteria comprise information on duration of the advertising contract, information on the number of times the advertisement is to be played, and information on the number of times the advertisement has already been played.

35. (original) The method of claim 32, wherein the step of providing advertisements from the set of possible advertisements comprises querying the user on whether to play a particular advertisement in its entirety.

36. (original) The method of claim 32, wherein the step of providing advertisements from a set of possible advertisements comprises selecting an advertisement based on prior user selections.

37. (original) The method of claim 32, wherein the step of ordering the set of possible advertisements based on a sales criteria associated with each advertisement of the set of possible advertisements comprises providing billing information on advertisements used based on a per use rate of charge.

QUAC0004

09/531,951

38. (original) The method of claim 32, wherein the step of providing advertisements from the set of possible advertisements based on the ordering comprises playing an audio advertisement via a voice interface.

5 39. (original) The method of claim 32, wherein the step of providing advertisements from the set of possible advertisements based on the ordering comprises displaying advertisements on a wireless application protocol (WAP) device.

10 40. (original) The method of claim 32, further comprising recording which particular advertisements were provided to a particular user to form a user record.

15 41. (original) The method of claim 40, wherein the step of ordering the set of possible advertisements based on a sales criteria associated with each advertisement of the set of possible advertisements comprises identifying played advertisements for a particular user from the user record.

42. (currently amended) A system of selecting and playing advertising in a voice controlled computer environment comprising:

20 means for receiving voice navigational commands from a user;  
means for generating a set of possible advertisements, the set of possible advertisements being related to a context;

means for ordering the set of possible advertisements based on a sales criteria associated with each advertisement of the set of possible advertisements and based on context ratio and sales ratio determination;

25 means for periodically selecting and playing advertisements automatically from the set of possible advertisements based on the ordering; and

means for selectively disabling a user's ability to stop or interrupt an advertisement from being played depending upon the advertisement being played;

30 wherein means for ordering based on said context ratio and sales ratio determination further comprises means for performing the following algorithm:

setting category weights,  $W_k$ , for each category  $C_k$  as follows:

initializing each  $W_k = 0$ , where  $k \in \{1, \dots, n\}$ ;

35 for each  $i \in \{1, \dots, m\}$  and for each  $j \in \{1, \dots, f\}$ , based on the current attributes of the existant,  $\{e_1, e_2, \dots, e_m\}$ , if  $e_i$  satisfies  $p_j$  and  $p_j$  is associated with category  $C_k$ , then setting  $W_k = W_k + w_j$ , where  $k \in \{1, \dots, n\}$ ;

QUAC0004

09/531,951

tabulating the categories' total weights independent of the attributes of the existant, wherein from said total weights, establishing each category's context ratio:

for each  $k \in \{1, \dots, n\}$  and for each  $j \in \{1, \dots, f\}$ , if  $p_j$  is associated with category  $C_k$ , then setting  $T_k = T_k + w_j$  and setting the context category context ratio,

5  $R_k = W_k / T_k$ ;

for each category  $k$ , multiplying each  $R_k$  by the category weight  $x_k$  of each Ad  $A_j$ , and then multiplying the sum by the sales criteria ratio of the Ad,  $S_j$ , to get context total  $G_j$ :

10 for each  $i \in \{1, \dots, r\}$ , calculate  $G_i$  where

$G_i = S_i \cdot (R_1 x_1 + \dots + R_n x_n)$ ; and

selecting the Ad  $A_i$ , where  $i$  is defined by  $\max(G_i)$ ,  $i \in \{1, \dots, r\}$ ;

wherein:

the list of attributes of the existant passed into the algorithm is defined by the set  $\{e_1, e_2, \dots, e_m\}$ , where  $m$  is the number of attributes in the existant;

15 the list of categories available to associate advertisements with is defined by the set  $\{C_1, C_2, \dots, C_n\}$ , where  $n$  is the total number of categories;

$W_i$  is a context category weight for each category,  $C_i$ , where  $i \in \{1, \dots, n\}$ ;

20 the market research criteria for all existants is represented by  $P = \{p_1, p_2, \dots, p_t\}$  where  $t$  is the total of all criteria in the database, each criterion  $p_i$  has an associated weight  $w_i$ , where  $i \in \{1, \dots, f\}$  and each attribute  $e_j$  tries to satisfy all  $p_i$ , for all  $i, j$ , where  $i \in \{1, \dots, m\}$ ,  $j \in \{1, \dots, f\}$  such that thus, if  $e_j$  satisfies  $p_i$ , and  $p_i$  belongs to category  $C_k$ , then  $W_k = W_k + w_i$ , where  $i \in \{1, \dots, m\}$ ,  $j \in \{1, \dots, f\}$ ,  $k \in \{1, \dots, n\}$ ;

25 the associated strength ratio  $R_s$  is calculated as  $R_k = W_k / T_k$ , where  $T_k$  is the total weight of all criteria in  $P$  relating to category  $k$ ; and

the list of advertisements generated by the demographic query are defined by the set  $A = \{A_1, A_2, \dots, A_r\}$ , where  $r$  is the total number of ads in the list, each ad  $A_i$  has its own category weight  $x_k$ , where  $i \in \{1, \dots, r\}$  and  $k \in \{1, \dots, n\}$  which is used in conjunction with the algorithm's corresponding context category weight ratio  $R_k$ ; and

30 wherein a sales ratio of an advertisement is defined as follows:

$(\% \text{ of units of time already played} - \% \text{ of ads played}) / \text{Number of units of time remaining in contract}$ .

35 means for providing an existant object of interest, said existant having one or more attributes and one or more market research criteria, said one or more market criteria having associated weights;

QUAC0004

09/531,951

~~means for providing a set of one or more advertisements, each of said one or more advertisements having one or more associated categories, wherein each one or more advertisements has category weight associated with each one or more associated categories, and each of said one or more advertisements having an associated sales ratio;~~

~~means for determining for each one or more categories a content category weight using said one or more market research criteria, and using said determined context category weight to calculate a category context ratio;~~

~~means for determining for each advertisement of said set of one or more advertisements a context total value, said context total value determined by said associated sales ratio, said category weight associated with said each one or more associated categories, and said category context ratio for said each one or more associated categories; and~~

~~means for determining a selected advertisement to play from said advertisements by determining a maximum context total value from said determined context total value for each advertisement.~~

43. (original) The system of claim 42, wherein the means for providing advertisements from a set of possible advertisements comprises means for querying the user on whether to play a particular advertisement in its entirety.

44. (original) The system of claim 42, wherein the means for ordering the set of possible advertisements based on a sales criteria associated with each advertisement of the set of possible advertisements comprises means for assigning weights to reflect purchasing behavior characteristics of the user.

45. (original) The system of claim 42, wherein the means for ordering the set of possible advertisements based on a sales criteria associated with each advertisement of the set of possible advertisements comprises means for providing billing information on advertisements used based on a per use rate of charge.

46. (currently amended) A computer program product comprising computer readable program code for advertising with an Internet voice portal, the program code in the computer program product comprising:

first computer readable program code for generating a set of possible advertisements;

QUAC0004

09/531,951

second computer readable program code for ordering the set of possible advertisements based on a sales criteria associated with each advertisement of the set of possible advertisements and based on context ratio and sales ratio determination;

third computer readable program code for periodically selecting and playing  
5 advertisements automatically from the set of possible advertisements based on the ordering;

fourth computer readable program code for receiving voice navigational commands from a user; and

fifth computer readable program code for selectively disabling a user's ability to  
10 stop or interrupt an advertisement from being played depending upon the advertisement being played;

wherein second computer readable program code for ordering based on said context ratio and sales ratio determination further comprises the following algorithm:

setting category weights,  $W_k$ , for each category  $C_k$  as follows:

15 initializing each  $W_k = 0$ , where  $k \in \{1, \dots, n\}$ ;

for each  $i \in \{1, \dots, m\}$  and for each  $j \in \{1, \dots, l\}$ , based on the current attributes of the existant,  $\{e_1, e_2, \dots, e_m\}$ , if  $e_i$  satisfies  $p_j$ , and  $p_j$  is associated with category  $C_k$ , then setting  $W_k = W_k + w_{ij}$ , where  $k \in \{1, \dots, n\}$ ;

20 tabulating the categories' total weights independent of the attributes of the existant, wherein from said total weights, establishing each category's context ratio:

for each  $k \in \{1, \dots, n\}$  and for each  $j \in \{1, \dots, l\}$ , if  $p_j$  is associated with category  $C_k$ , then setting  $T_k = T_k + w_{ij}$ , and setting the context category context ratio,  $R_k = W_k/T_k$ ;

25 for each category  $k$ , multiplying each  $R_k$  by the category weight  $x_k$  of each Ad  $A_i$ , and then multiplying the sum by the sales criteria ratio of the Ad,  $S_i$ , to get context total  $G_i$ ;

for each  $i \in \{1, \dots, l\}$ , calculate  $G_i$  where

$G_i = S_i \cdot (R_1x_1 + \dots + R_nx_n)$ ; and

selecting the Ad  $A_i$  where  $i$  is defined by  $\max(G_i)$ ,  $i \in \{1, \dots, l\}$ ;

30 wherein:

the list of attributes of the existant passed into the algorithm is defined by the set  $\{e_1, e_2, \dots, e_m\}$ , where  $m$  is the number of attributes in the existant;

the list of categories available to associate advertisements with is defined by the set  $\{C_1, C_2, \dots, C_n\}$ , where  $n$  is the total number of categories;

35  $W_j$  is a context category weight for each category,  $C_k$ , where  $k \in \{1, \dots, n\}$ ;

QUAC0004

09/531,951

- the market research criteria for all existants is represented by  $P = \{p_1, p_2, \dots, p_t\}$  where  $t$  is the total of all criteria in the database, each criterion  $p_i$  has an associated weight  $w_i$ , where  $i \in \{1, \dots, t\}$  and each attribute  $e_i$  tries to satisfy all  $p_i$  for all  $i, j$ , where  $i \in \{1, \dots, m\}$ ,  $j \in \{1, \dots, t\}$  such that thus, if  $e_i$  satisfies  $p_j$ , and  $p_j$  belongs to category  $C_k$ , then  $W_k = W_k + w_j$ , where  $j \in \{1, \dots, m\}$ ,  $j \in \{1, \dots, t\}$ ,  $k \in \{1, \dots, n\}$ ;
- 5 the associated strength ratio  $R_s$  is calculated as  $R_k = W_k/T_k$ , where  $T_k$  is the total weight of all criteria in  $P$  relating to category  $k$ ; and
- the list of advertisements generated by the demographic query are defined by the set  $A = \{A_1, A_2, \dots, A_r\}$ , where  $r$  is the total number of ads in the list, each
- 10 ad  $A_i$  has its own category weight  $x_k$ , where  $i \in \{1, \dots, r\}$  and  $k \in \{1, \dots, n\}$  which is used in conjunction with the algorithm's corresponding context category weight ratio  $R_k$ ; and
- wherein a sales ratio of an advertisement is defined as follows:  
 (% of units of time already played - % of ads played) / Number of units of  
 time remaining in contract.
- 15 ~~computer readable program code for providing an existent object of interest, said existent having one or more attributes and one or more market research criteria, said one or more market criteria having associated weights;~~
- ~~computer readable program code for providing a set of one or more advertisements, each of said one or more advertisements having one or more associated categories, wherein each one or more advertisements has category weight associated with each one or more associated categories, and each of said one or more advertisements having an associated sales ratio;~~
- 20 ~~computer readable program code for determining for each one or more categories a content category weight using said one or more market research criteria, and using said determined context category weight to calculate a category context ratio;~~
- 25 ~~computer readable program code for determining for each advertisement of said set of one or more advertisements a context total value, said context total value determined by said associated sales ratio, said category weight associated with said each one or more associated categories, and said category context ratio for said each one or more associated categories; and~~
- 30 ~~computer readable program code for determining a selected advertisement to play from said advertisements by determining a maximum context total value from said determined context total value for each advertisement.~~
- 35

QUAC0004

47. (original) The program code of claim 46, wherein the first computer readable program code for generating a set of possible advertisements comprises computer readable program code for selecting advertisements based on user constraints.

5 48. (original) The program code of claim 46, wherein the second computer readable program code for ordering the set of possible advertisements based on a sales criteria associated with each advertisement of the set of possible advertisements comprises computer readable program code for assigning values to advertisements based on contractual arrangements and attractiveness of the user.

10

49. (original) The program code of claim 46, wherein the third computer readable program code for providing advertisements from the set of possible advertisements based on ordering comprises computer readable program code for transforming semantically structure data and providing the data via a speech interface.

15

50. (original) The program code of claim 46, wherein the third computer readable program code for providing advertisements from the set of possible advertisements based on ordering comprises computer readable program code for transmitting advertisements to a wireless application protocol (WAP) device.

20

51. (original) The program code of claim 46, wherein the third computer readable program code for providing advertisements from the set of possible advertisements based on ordering comprises computer readable program code for transforming internet-based information into speech or vocal transmission over the telephone.
